Internship Title: Rain Garden Community Coordinator Intern

Organization Worked For: Jefferson County Marine Resources Committee

Student Name: Isabelle Jones

Internship Dates: 5/25/23 8/18/23

Faculty Advisor Name: Cathy Reidy Liermann

Department: ENVS

III. DESCRIPTION

Provide a brief description of the project or program on which you worked, the objectives of that project or program, and your role as an intern within that project or program:

The MRC created their rain garden project in 2014 to address concerns about stormwater pollution in East Jefferson County, which were heightened due to the area’s proximity to the Puget Sound. Tire particulates and other contaminants were threatening the health of native species like Coho salmon due to being flushed directly into the Puget Sound. Rain gardens were determined to be effective natural bioretention systems that can filter stormwater before it reaches the Puget Sound. Over the next decade 18 rain gardens were installed across Port Townsend, Port Hadlock, and Quilcene. The MRC struggled with maintaining stewardship of the gardens as they rely on volunteers for upkeep to maintain function and appearance.

I was tasked with recruiting both one-time volunteers for work party events and long-term stewards for more committed maintenance. Part of this included increasing general community awareness and knowledge of the program. In doing so, I created a system for volunteer recruitment, a pool of active volunteers, and an educational framework to ensure the program’s success well into the future. Being the first person to fill this newly created position, I had a substantial degree of creative freedom in how to achieve these goals. I became a leader and supervisor for rain garden events and directed the rain garden program over the 3 months that I was employed at the MRC.

IV. DUTIES AND RESPONSIBILITIES

Provide a list of your specific duties and responsibilities as an intern:

1. Research rain gardens and how they function as stormwater systems, as well as how to maintain them to ensure function and appearance.
2. Create educational materials, including an ArcGIS Storymap, about rain gardens and disseminate them to the community.
3. Reach out to local volunteers and recruit new ones to garner engagement in short and long-term rain garden maintenance.
4. Create and disseminate promotional materials to advertise for the program in general as well as for specific work events.
5. Assist MRC members in evaluating the status and needs of rain gardens to determine priorities for future work events.
6. Schedule, organize, and host work events for rain gardens. This involved gathering volunteers, managing the days’ priorities and schedule, gathering supplies, and answering questions about the rain gardens.
7. Participate in meetings with partner organizations to discuss facilitating rain garden stewardship.
V. LEARNING OBJECTIVES

Describe what you learned from your internship and how this experience contributed to your educational goals:

I learned both hard and soft skills from my internship as maintaining the rain garden program was severalfold. The synthesis of environmental sciences, communications, gardening, outreach, and volunteer coordination fulfilled the ES 5 learning objective of integrating multiple disciplines into environmental sciences. I had to quickly become an expert in rain gardens and bioretention systems. This included learning about native plants, landscape maintenance, best practices for removing invasive plants, and stormwater pollutants. Applying my newfound knowledge to real-world gardening and maintenance met the ES 4 learning objective of applying environmental sciences to real world applications. I was able to utilize concepts from my ENVS program—the danger of invasive species being one of them—in my work in the rain gardens, effectively fulfilling ENVS 4.

I also learned how to create an ArcGIS Story Map, which involved gathering data from a large collection of files and synthesizing them to be incorporated into a map. The end result had to be palatable for both the local community as well as for other MRC members, fulfilling the ES 3 learning objective.

I learned a decent amount about file organization through utilizing Dropbox throughout my internship. I wrote a press release for the first time, learning how to structure and word it to best disseminate information about the rain garden program. This practice in effectively communicating the program and its needs met the ENVS 6 learning objective. I also honed my graphic design skills in the numerous promotional materials that I created to advertise our need for volunteers.

Throughout my management of the rain gardens I encountered invasive species, overgrowth, dead plants, and other problems within them. Part of my internship was visiting the gardens and assessing their needs and problems, effectively researching them, and then coming up with solutions. This aspect of my internship, fitting with ENVS 5, was put into practice with my efforts to diminish the invasive Canada Thistle in some of the gardens.

I learned soft skills like managing a crew of volunteers, being a community liaison, and coordinating with several people’s schedules at once. I had to be a contact for community members, neighbors, longtime volunteers, organization members, and others. In some cases I had to handle conflicting opinions about maintenance responsibility. All of this I did collaboratively with other MRC members, meeting ENVS 3.

As my educational goals are to focus on structural management of environmental programs, this internship gave me the confidence to move forward with those goals. I was able to thrive in this position that synthesized environmental knowledge and management and leadership, so I know that I am heading down the right path. My internship equipped me with valuable technical skills that will likely assist me with future classes, as well as soft skills that will indelibly benefit me regardless of what I’m doing.
APPENDIX I. SUPERVISOR LETTER

Attach a signed letter from your supervisor, on the host institution’s letterhead, stating that you have completed the internship according to the organization’s expectations and confirming the dates and number of hours of your internship work.
Internship hours for Isabelle Jones

Montgomery, Monica <monica.montgomery1@wsu.edu>
Wed 9/08/2023 12:53 PM
To:Catherine Reidy Liermann <reidylc@wwu.edu>

You don't often get email from monica.montgomery1@wsu.edu. Learn why this is important

Hi Catherine,

Isabelle Jones, who has been interning with the Jefferson County Marine Resources Committee this summer, has requested that I email you to confirm her hours worked as our Rain Garden Community Coordinator intern. As of the end of July, she has completed 182.5 hours and is on track to complete the 240 hours of her internship (ending the week of August 14th). She has been a wonderful addition to this project, helping to organize rain garden maintenance work parties and collecting and creating some key materials for an "Adopt-a-Rain Garden" program. Please let me know if you need any additional information.

Sincerely,

Monica Montgomery (she/her)
Water Programs Coordinator

COLLEGE OF THE ENVIRONMENT INTERNSHIP REPORT - Environmental Science and Environmental Studies

RAIN GARDEN PLANTING DAYS
July 13th and 14th
121 Oak Bay Road
Corner of Franklin st. and Adams St.
When: 10am - 12pm
Join us in giving two rain gardens some TLC by planting perennials, weeding, removing debris, and watering. Supplies and refreshments will be provided!

Rain Garden Work Party:
Maritime Center
08/01/23
WHERE:
Intersection of Monroe and Water sts.; in front of the Swan Hotel
WHEN:
10 am - 12:30 pm
WHAT:
Weeding & mulching

Let's Mulch!
Thursday, 6/15
Time: 10 am - 1 pm
Location: Meet at Franklins + Adams Street
Bring: Water, warm layers, gardening tools (provided--but feel free to BYO!)

Rain Gardens Are the Salish Sea’s Natural Defenders—and They Need Your Help

Port Townsend, WA—Since 2014, the Jefferson County Marine Resources Committee (MCRC) has installed 16 rain gardens across (Port) Jefferson County, with the help of numerous community partners and volunteers. These gardens—home to button, creeping thistle, red hot poker, and more—serve multiple purposes: They fight the Salish Sea’s greatest pollution threat: stormwater runoff, located on unsurfaced suburban street corners, the gardens’ special soil mixtures, plants, and their mycorrhizal and microbial communities work together to filter out harmful contaminants like BP-Ix systems, a fine particulate-related chemical that has been directly linked to mortality in adult chinook salmon.

The MCRC’s rain garden program is at its heart, a community project—being built and cared for largely by volunteers. Rain gardens not only treat stormwater runoff but also offer a way for volunteers to connect with other community members while learning about green infrastructure and long-lasting environmental improvement.

Rain gardens require just a small amount of maintenance, with only a handful of days needed to seed, water, and mulch throughout the year. Volunteers can choose to adopt a specific rain garden or be on call for work parties throughout the year via a mailing list. If you are interested in being a part of Jefferson County’s green stormwater solutions, please visit the following link: www.bit.ly/RainGardenStorms

For more information, please visit www.jeffersonwa.org

About the Jefferson County Marine Resources Committee (MCRC): The MCRC is an advisory group to the Board of County Commissioners and part of the regional Northwest Straits Marine Conservation Initiative. MCRC members are citizen-volunteers committed to protecting and restoring marine habitats in our ecologically rich corner of the world. This work is funded by the State of Washington and its interagency protection agency through the Hogel Sound Partnership.
