Puget Sound Federal Task Force – Salish Sea Ecosystem Conference

April 27, 2022

Topics

1. PSFTF Co-chairs Overview and Relationship to Treaty Rights
2. Cross-cutting Actions
3. Cross-cutting Habitat Actions
4. Nearshore and Shoreline
5. Floodplains, Riparian and Estuaries
6. Fish Passage
7. Stormwater
8. Shellfish
9. Science and Monitoring
10. Coordination

PSFTF Co-chairs overview and relationship to Puget Sound/Salmon Recovery and Treaty Rights

PUGET SOUND FEDERAL TASK FORCE 2017-2021 PROGRESS REPORT

November 2021

- Overall goal is to prioritize, coordinate and leverage diverse federal programs toward a healthy and sustainable Puget Sound, and honor the rights reserved through treaties.
- 99 of 127 priority federal actions to protect and restore Puget Sound implemented as described
- Regional and state leader support for staff participation in workgroups and subteams
- Regional federal leader meetings with state and tribal leaders, active participation in the Puget Sound Management Conference

PSFTF Co-chairs overview and relationship to treaty rights

PUGET SOUND FEDERAL TASK FORCE

ACTION PLAN

2022-2026

DRAFT - March 2022

Priority Federal Action	Number of Actions
Crosscutting	13
Crosscutting - Habitat	8
Nearshore and Shoreline	6
Floodplains, Riparian and Estuaries	22
Fish Passage	10
Stormwater	12
Shellfish	13
Science and Monitoring	25
Governance	6
Total	115

Cross-cutting Actions –EPA's Puget Sound Program

Vision: Puget Sound - Clean waters, thriving ecosystem

Mission: Provide funding and support for Puget Sound recovery efforts via a collaborative governance framework

EPA's work with the Puget Sound Partnership, state agencies, tribes and other partners has supported important gains in recovery. Results include, for example:

- Comprehensive regional plans to restore the Sound.
- More than \$1 billion leveraged for recovery.
- Partnerships with 19 federally recognized tribes.
- Transboundary collaboration with Canada.
- Scientific gains on toxic effects of urban stormwater.
- Since 2007, a net increase of harvestable shellfish beds.

Looking ahead, EPA recognizes that more must be done to achieve a healthy Puget Sound. To achieve positive trends, EPA will continue:

- To enhance Federal Task Force leadership, including a new Action Plan for 2022-2026.
- Cooperation with Canada.
- Fulfillment of National Estuary Program responsibilities, including the approval of a new comprehensive management plan for recovering Puget Sound (the Action Agenda).
- Partnering with tribes.
- Funding and grants, including managing and awarding up to \$100 million in projects over the next five years.
- Scientific support.

Cross-cutting Actions – 2022-2026

Summary

- Implement major federal environmental laws
- Environmental benefits from the Infrastructure Law
- Direct and indirect benefits from the Bureau of Indian Affairs and Federal Transit Administration
- Oil spill preparedness from the U.S. Coast Guard
- Green Duwamish Urban Waters Federal Partnership
- Coordination with Canada
- Climate Change and Environmental Justice

Cross-cutting Habitat Actions

Background

- Habitat is major focus of Action Plan
- Actions that involve multiple habitat focus areas and often involve multiple agencies

Examples

- Habitat restoration permitting efficiency
- Habitat Strategic Initiative Lead
- NRCS role riparian habitat
- NOAA/USFWS Pacific Coastal Salmon Recovery Plan
- Navy REPI Reserve Program
- Multi-benefit projects – Emergency Relief on Federal Roads (ERFO)

Nearshore and Shorelines

2017-21 Actions

NOAA & Tulalip Tribe Snohomish Estuary Monitoring Plan

- Developed protocols for monitoring physical and ecological attributes of estuary and restoration action – 10 years of monitoring
- Results and methods are transferable to estuaries in Puget Sound.

Puget Sound Nearshore Ecosystem Restoration Program

- Restore >2,000 acres of estuarine and critical habitat for salmon

Nearshore and Shorelines - Progress

NOAA Coastal Ecosystem Resiliency Funding of Community-Based Restoration

- 2,350 acres of estuary habitat and 37 miles of river habitat – Whidbey Basin
- Partnership: Tulalip Tribes, WDFW, Snohomish Conservation District, The Nature Conservancy

Leque Island Estuary Restoration, Whidbey Basin

Nearshore and Shorelines - Future

Nearshore Programmatic

- NOAA developing in collaboration with USACE and USFWS - Summer 2022 goal

NARROWS PARK, GIG HARBOR, WA

BEFORE

AFTER

Floodplains, Riparian, Estuaries - Past

Examples:

- Floodplains by Design
- EPA funded: Reach Scale Planning
- NRCS Agricultural Conservation Easement Program and Resource Conservation Partnership Program
- NOAA, FEMA Floodplain Management Forum

With the SLS approach, diverse land and water benefits are expected—here in the Stillaguamish Estuary and in other areas.

Floodplains, Riparian, Estuaries

- Progress

FEMA lead:

Federal –
State

Integrated
Floodplain
Management
Working
Group

Multi-benefit
projects

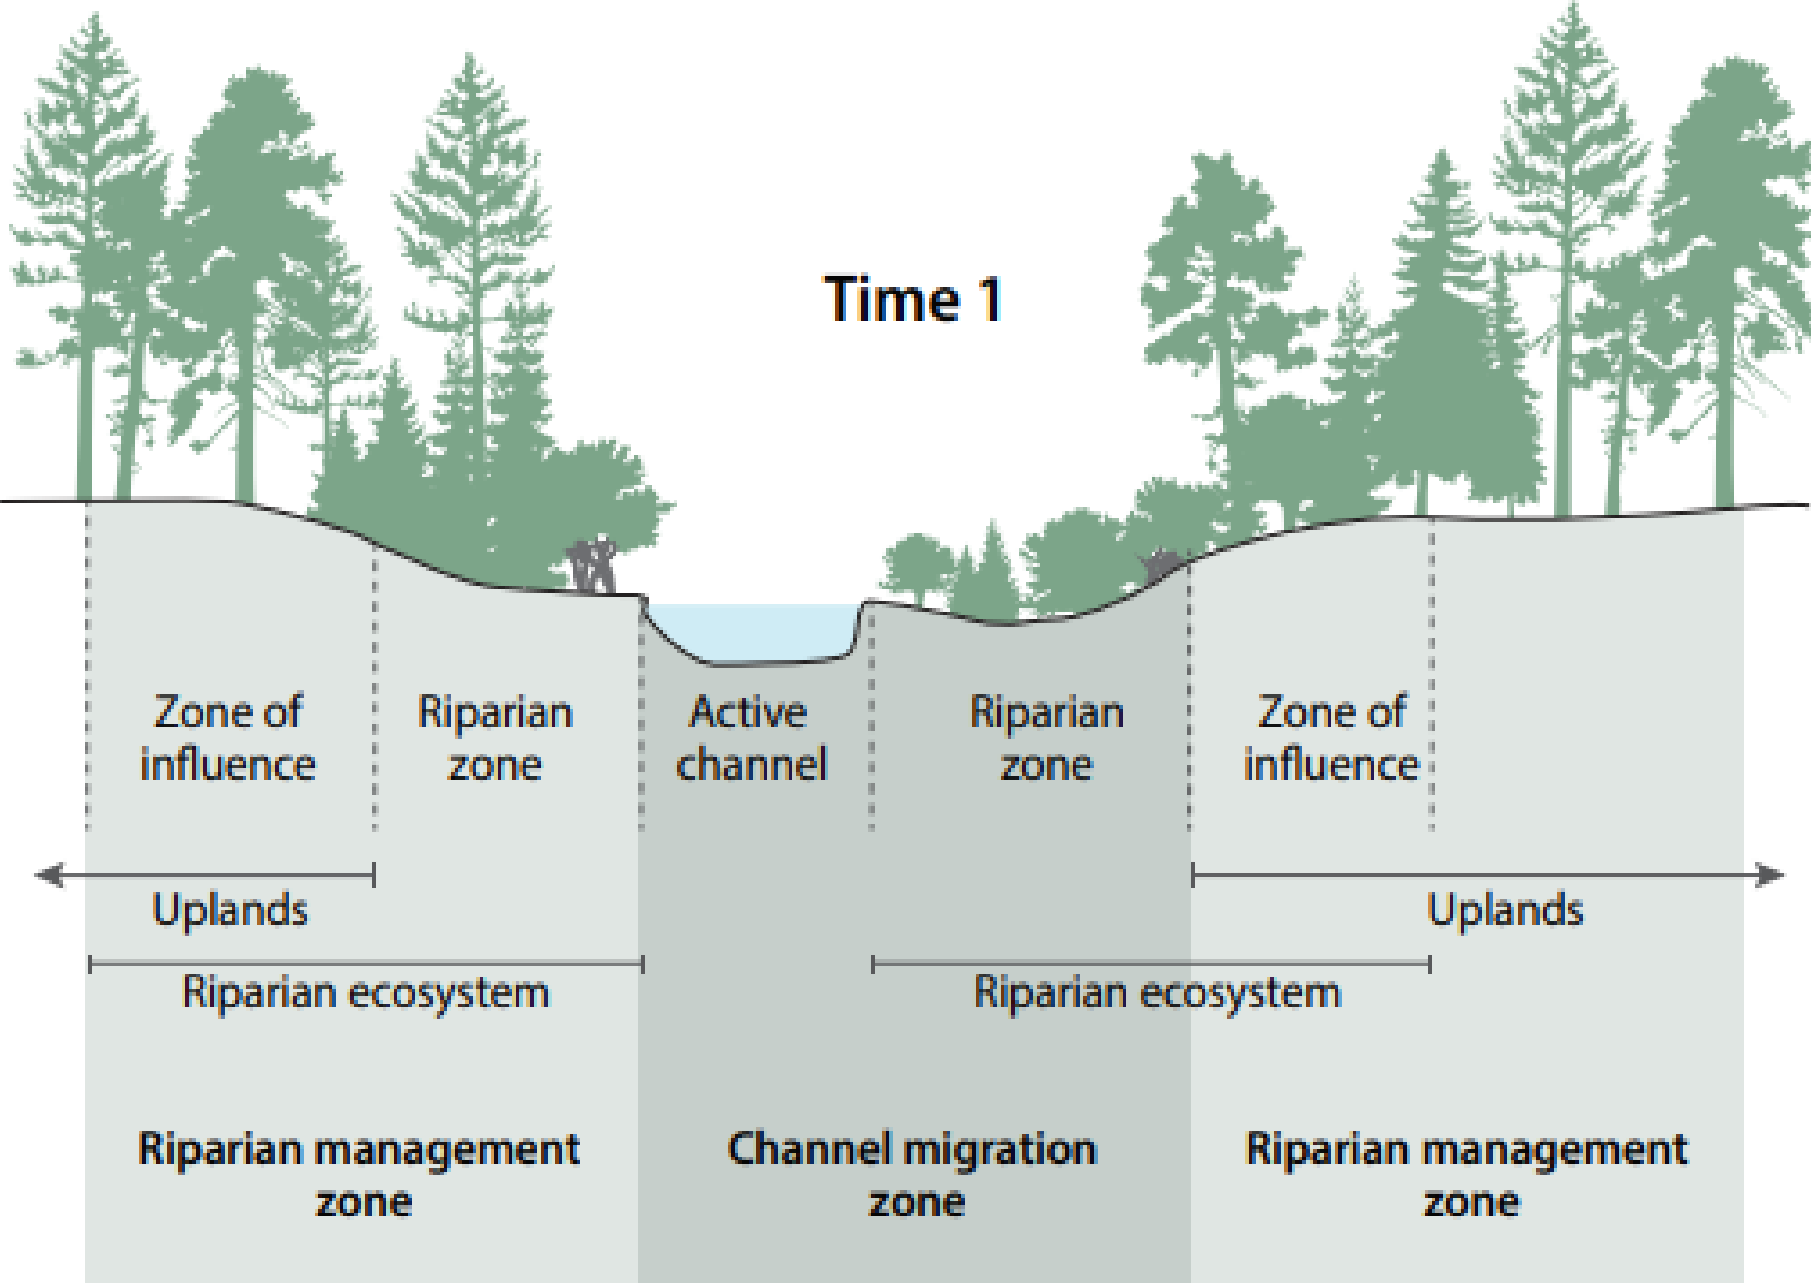

Farm, fish,
and flood

Floodplains, Ripai Estuaries - Future

Examples:

- Federal, State, Tribal Coordination: Riparian protection and restoration
- Federal competitive grant support for Riparian Habitat Protection/Recovery
- FEMA: Climate Adaptation Enterprise Group

Source: WDFW (2020), Riparian Ecosystems, Vol. 2

2017-2021 Federal Action Plan – Fish Passage

EXAMPLE: Middle Fork Nooksack River Dam Removal (2020)

EXAMPLE: NRCS Fish Passage Restoration in Skagit Co. in partnership with Swinomish Tribe using EQIP funds

2022-2026 Federal Action Plan –

Fish Passage

A re-focus on being in tune with State FBRB priorities and needs, including Federal funding match opportunities to accomplish more fish passage projects

Continue to stay abreast of FBRB strategies and needs and do what Federal agencies can to rotate funding support and other management actions to connect with those priorities

Explore ways to take additional steps to restore fish passage in a more watershed approach.

Explore ways to upkeep/improve/create streamlined regulatory mechanisms in order to be efficient for project implementation

INFRASTRUCTURE INVESTMENT AND JOBS ACT – Could aid in accelerating fish passage restoration!!

2017-2021 Federal Action Plan - Stormwater

*Stormwater is a major driver of non-point source pollution from forested, agricultural, urban, and suburban land uses. Ongoing Puget Sound federal actions are particularly focused on **urban runoff***

The Urban Stream Syndrome: a global phenomenon of ecological decline

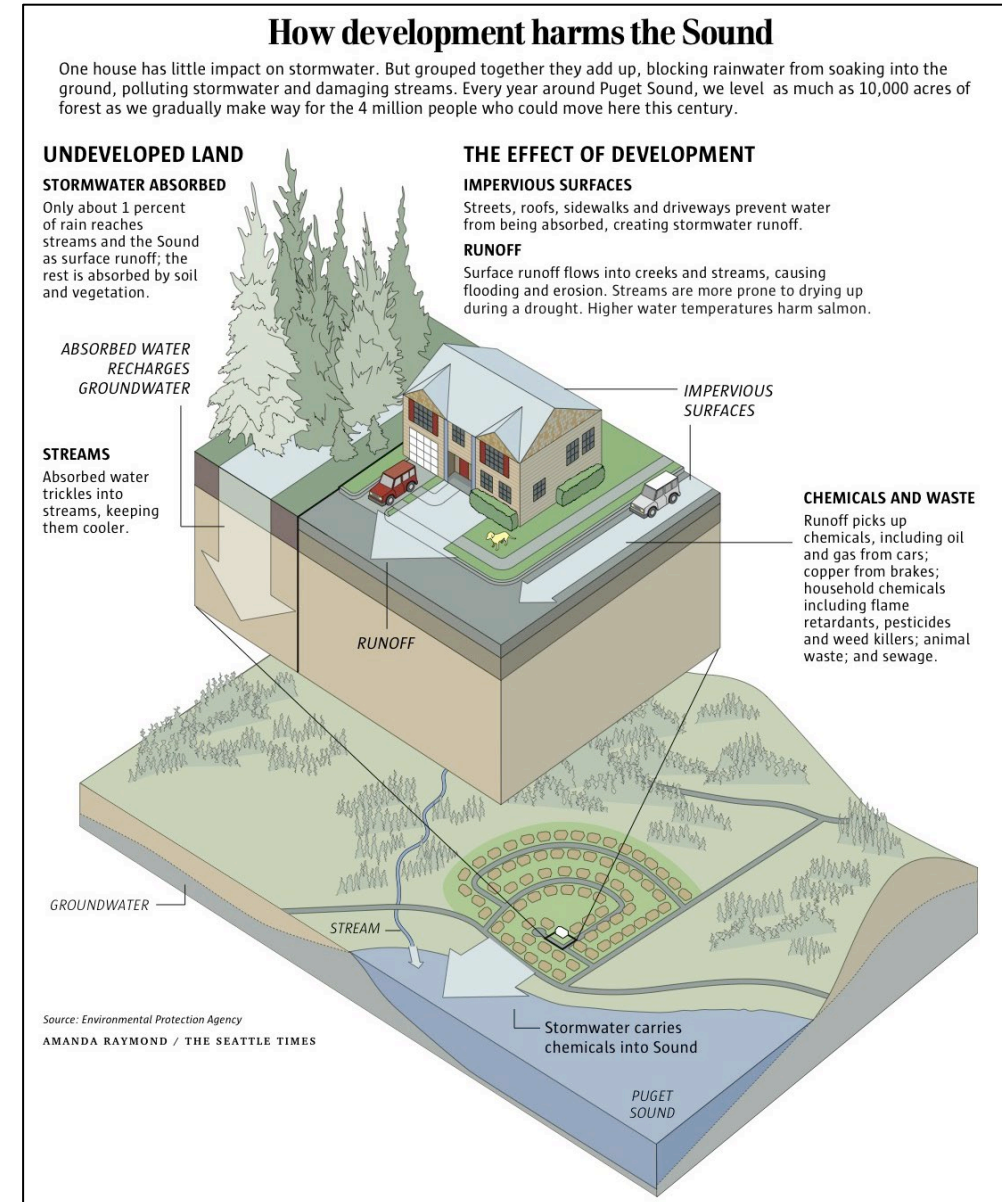

- The Urban Stream Syndrome describes a consistently observed ecological degradation of streams draining urban land.
- Mechanisms are complex and interactive, but are primarily driven by **urban stormwater runoff** delivered to streams by hydraulic drainage systems.
- Symptoms include a flashier hydrograph, **elevated contaminants** and nutrients, altered channel morphology, and reduced biotic richness, with increased dominance of tolerant species.

Global perspectives on the urban stream syndrome

Derek B. Booth^{1,5}, Allison H. Roy^{2,6}, Benjamin Smith^{3,7}, and Krista A. Capps^{4,8}

2017-2021 Federal Action Plan – Stormwater

Overarching and shared goals across federal natural resource agencies

1

Define the nature and extent of stormwater threats to Puget Sound

2

Identify affordable and effective clean water mitigation strategies

3

Promote the building of green cities and communities

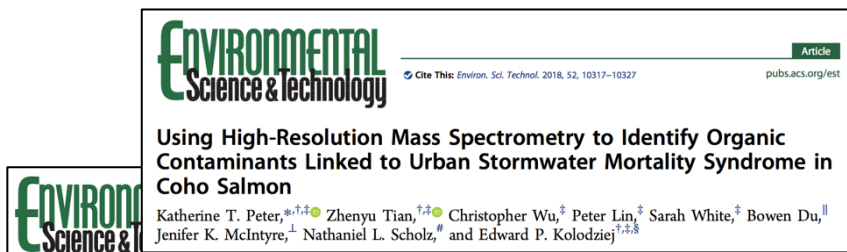

2017-2021 – Stormwater Accomplishments

Accomplishments – spotlight on the the coho urban mortality syndrome

1

Define the nature and extent of stormwater threats to Puget Sound

Green Infrastructure Federal Collaborative

Learn more. Take Action.

2022-2025 Federal Action Plan – Stormwater Goals

- Continue research on the large list of unidentified chemicals in urban runoff
- Develop consistent monitoring methods for priority emerging threats (e.g., 6PPD-q)
- Incorporate other major habitat co-stressors (e.g., climate) into salmon vulnerability forecasts

RESEARCH

MANAGEMENT

- Develop and implement effective clean water strategies (watershed and decadal scales)
- Streamline federal interagency consultations under the ESA (e.g., transportation sector)
- Continue close coordination with Tribal comanagers and non-federal stakeholders

Known toxics in urban runoff... but many more unknown

Copper
Found in vehicle brake pads and some boat-hull paint.

PBDEs
Flame retardants found in sofa cushions, computers, wire insulation, drapes.

PAHs
Asuite of chemicals created by burning and released by creosote pilings, oil spills, vehicle exhaust, forest fires, volcanoes.

PCBs
Banned but long-lived organic chemicals found in transformers, plastics, insulation, adhesives, paint.

Petroleum
Early state estimates wrongly suggested the spilled petroleum washing into Puget Sound equaled an Exxon Valdez-size spill every two years. Anew state study contends it's a fraction of that — but still at least 710,000 pounds a year.

PAHs
PAHs are attracted to fish embryos like magnets. Even tiny doses can change the shape of a developing fish's heart, causing the fish to be too slow to escape predators.

Copper
Brief doses can alter how baby fish smell, which is key to eluding predators. It can also affect how fish sense water movements when predators approach.

PBDEs/PCBs
These chemicals build up over time, especially in fatty fish like chinook — the preferred food for orcas. They can make marine life more susceptible to disease. May be harmful to children of pregnant women who eat contaminated fish.

Shellfish

EPA Laboratory Support for Microbial Source Tracking

Water quality teams sample streams and ditches and use DNA analysis methods to help evaluate whether the fecal bacteria are more likely from dogs, humans, cattle, or other animals.

This information sheds light on trouble spots, and helps the counties hone their management actions (e.g., whether to focus on onsite sewage systems or pet waste).

Shellfish

Advancing Research and Restoration for Olympia oysters, pinto abalone, basket cockles, sea cucumbers and native kelp species throughout Puget Sound

Since 2017, NOAA has provided nearly \$450,000 to support a variety of research, restoration and operations associated with kelp, including activities at the hatchery.

EPA's Puget Sound Shellfish Strategic Initiative is providing \$100,000 to support climate change research related to cockles and Olympia oysters.

Puget Sound Restoration Fund Washington Conservation Corps team member, Jackelyn Garcia, tending to the Olympia oyster spat on bags of Pacific oyster shell at the Chew Center.

Agency	Proposed Shellfish Action - 2022-2026 Federal Task Force Action Plan		
EPA	Shellfish Strategic Initiative funding to reduce fecal pathogens and upgrade shellfish beds		
NOAA	Implement ESA and EFH aquaculture regulatory framework		
NOAA	Ocean Acidification Monitoring		
NOAA	Harmful Algal Bloom Detection and Prediction		
EPA	Harmful Algal Bloom Response		
NOAA	Pathogenic Vibrio Detection and Prediction		
NOAA	Conservation Genetic Risk Assessment

NRCS	Native Oyster Restoration Projects		
NOAA	Support Shellfish Aquaculture Readiness		
EPA	Microbial Source Tracking of Fecal Pathogen Pollutions		
EPA, NOAA, USFWS	Washington Sea Grant European Green Crab Monitoring & Control		

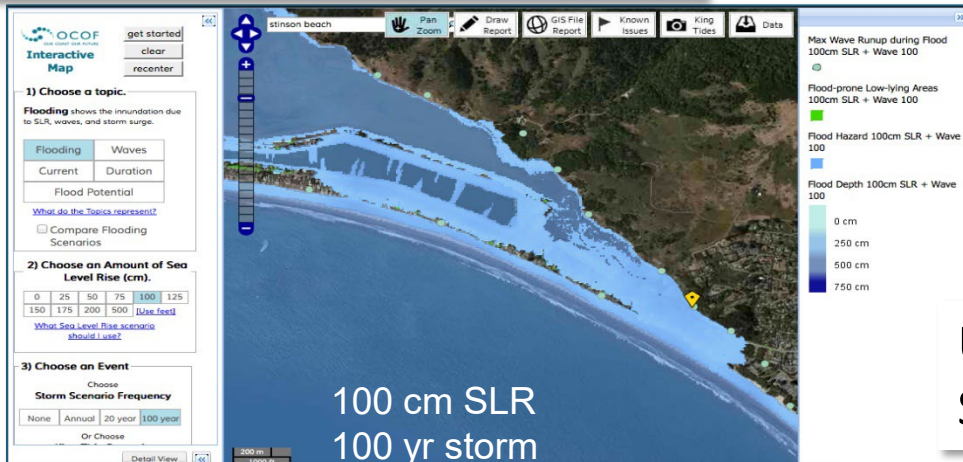

Science and Monitoring - Progress

- Improved interagency coordination, information sharing
- Interagency Agreements to support unfunded priority science
- Improved alignment of Agency science programs
- Inventory of Federal science actions supporting Puget Sound recovery

Science and Monitoring – EPA Funded Interagency Agreements, FY17 – FY21

NOAA	Salmon Life Cycle Models to Identify Priority Habitat Restoration Actions and Climate Resilience Strategies
NOAA	Puget Sound Habitat Status and Trends Monitoring
USGS	Improved Framework to Determine how ESA-Listed Species are Responding to Climate Change and other Stressors
EPA, USFWS, BIA, NOAA, USGS, PNNL	Improved Early Detection and Monitoring of European Green Crab in Puget Sound

Science and Monitoring - Future

- Addressing Federal Agency and National Program silos through coordination and alignment
- Leveraging infrastructure funding with Puget Sound recovery science
- Coordination with State, Tribal, academic, and NGO science community
- Prioritizing Federal science activities, aligning resources and priorities
- Outreach, engagement, training, and tech transfer

Coordination

- Coordination with tribes to improve consistency between federal actions and honoring reserved treaty rights
- Engagement with the Puget Sound Partnership and other state entities to align federal actions with the Action Agenda
- Coordination and elevation of issues with federal headquarters counterparts in Washington D.C.
- Identification of key perspectives and contributors among tribal and federal partners in the coalition of working groups
- Alignment of Action Plan with tribal requests around Riparian Habitat

Federal and Tribal leaders Meeting: November 4th, 2021

Questions and Input
