

## Supplementary material to “Cascadia Fore Arc Seismic Survey: Open-Access Data Available”

7 December 2012

W. Steven Holbrook, Department of Geology and Geophysics, University of Wyoming, Laramie

Graham Kent, Nevada Seismological Laboratory, University of Nevada, Reno

Katie Keranen, ConocoPhillips School of Geology and Geophysics, University of Oklahoma, Norman

H. Paul Johnson, School of Oceanography, University of Washington, Seattle

Anne Trehu, College of Earth, Ocean, and Atmospheric Sciences, Oregon State University (OSU),  
Corvallis

Harold Tobin, Department of Geoscience, University of Wisconsin, Madison

Jackie Caplan-Auerbach, Geology Department, Western Washington University, Bellingham

Jeff Beeson, College of Earth, Ocean and Atmospheric Sciences, OSU

AGU*, 93(50), 521–522, doi:10.1029/2012EO500002. (View the full article at [http://www.agu.org/journals/eo/v093/i050/2012EO500002/2012EO500002\\_brr.pdf](http://www.agu.org/journals/eo/v093/i050/2012EO500002/2012EO500002_brr.pdf).)

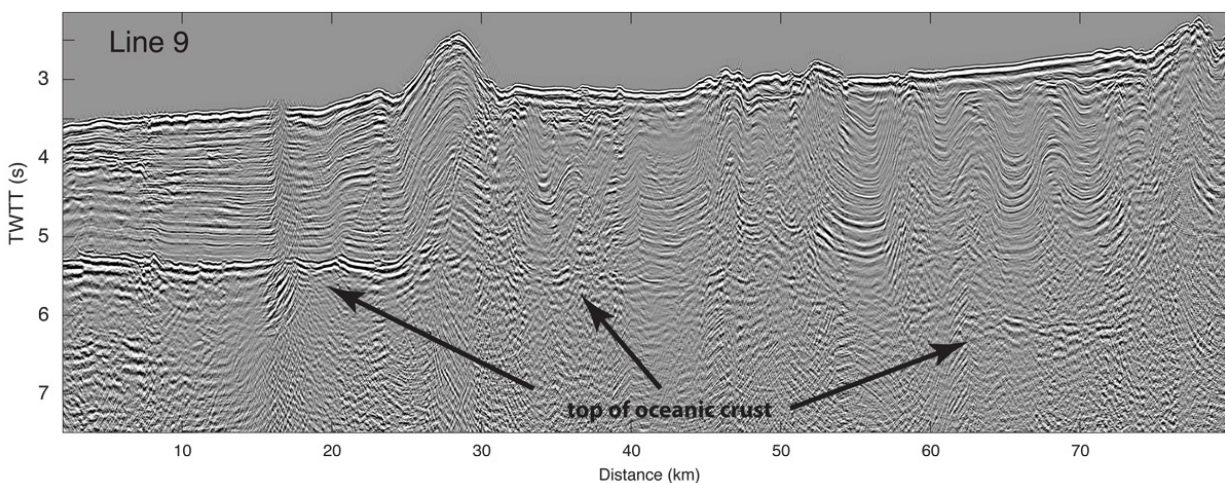

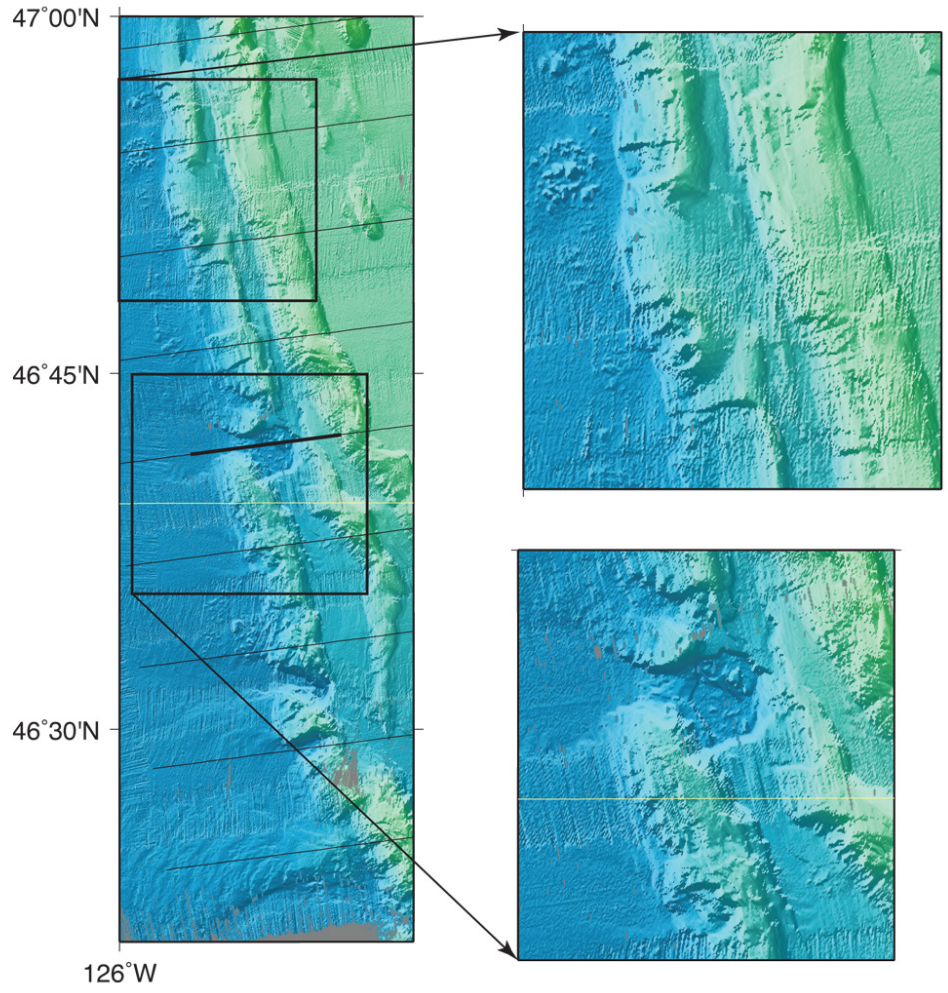

Figure S1. Time migrated section showing the deformation front and accretionary prism on Line 9, at the south end of the COAST survey. Note the reflections from the top of oceanic crust, and the uniformly folded sediments in the prism from 55–75 km. The vertical feature near 16 km is a processing artifact, resulting from a short shut-down of the airguns due to a marine mammal sighting.

*Figure S2. Multibeam bathymetry over the deformation front in the COAST survey area. Seismic lines (1-9) are shown as thin lines. Zooms of collapse features are shown top right and bottom right.*
